**Job Title:**

**Website Manager**

**Job Description:**

We're looking for a website manager in our website development unit, which covers a wide range of tools to maintain Web infrastructure. We need someone who thrives in a fast-growing dynamic environment, searches for ways for constant improvements, has perseverance in achieving goals, takes responsibility and ownership. In this role, you will run the process of improving current and implementing new solutions, supporting the infrastructure of the company, and also be in charge of people management.

**Specific responsibilities:**

- Work tightly with Development leads on strategic initiatives and ad-hoc cases
- Maintain and build a strategy for Web products
- Collaborate with stakeholders, to help them achieve the greatest results
- Support process of delivery
- Build, scale and motivate a team of engineers
- Provide the best possible experience on the Web for both: internal customers, at the same time with potential and existing users

**Qualifications:**

- Excel Web development experience
- University Degree required
- Upper-Intermediate English level
- Experience with Angular 2+, Laravel, MySQL
- Deep understanding of how the modern Web works
- Experience with diverse and cross-functional teams
- Expertise in content management tools
