Job Title:	**Senior Data Engineer**

Job Description: You will work with data infrastructure based on cloud solutions as well as on-premise databases. You will support everything from complex ETL pipelines to machine learning and real-time data provisioning to move data around all Wrike systems.

Specific responsibilities:
- Support data integrations and services providing data to partner SAAS solutions
- Efficiently write maintainable SQL and Python code
- Extend ETL processes and prepare data marts for analysts
- Maintain the cloud warehouse (load, and data quality)
- Build positive relationships with business partners

Qualifications:
- Excel work experience in data engineering
- Excellent knowledge of Python
- Advanced SQL skills
- University Degree required
- Upper-Intermediate English level
- Knowledge of enterprise relational databases like PostgreSQL or Oracle + cloud data warehousing solutions
- Knowledge of web APIs\REST
- Knowledge of data pipeline stack (Airflow, Workato\Informatica\Pentaho, etc)
- Experience with popular SAAS vendors
- Knowledge of Google infrastructure (Big Query, ML Engine, Cloud functions, Cloud Pub/Sub, Composer, etc)
- Knowledge of CI\CD
- Be familiar with Kafka/Fluentd, Hadoop/Spark, and general knowledge of NoSQL databases
- Familiarity with sales or marketing operations processes
